

ONSIGHT HOW TO:

ENABLE SINGLE SIGN ON FOR LOGIN

Single Sign On (SSO) can be enabled for enterprise customers to use one account for your domain when logging into Onsight Platform Manager and Onsight Connect. The benefits of SSO are:

- No need to type in credentials
- No need to remember/renew passwords
- No weak passwords

NOTE: SSO must be enabled for your account by your system administrator.

OVERVIEW:

In order to enable single sign on, you will need to launch Onsight Connect on your device and:

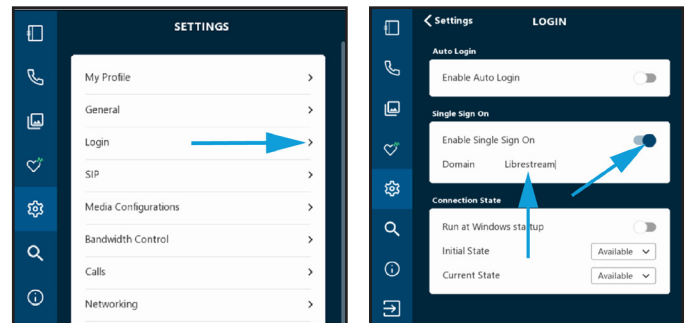

- Modify your Login Settings
- Logout and Login using SSO

Modify Your Login Settings

To enable **SSO**, you must:

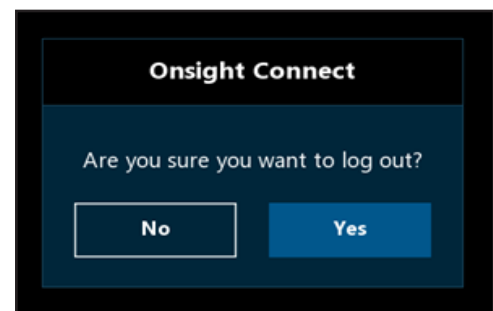

1. Click **Settings**  and select **Login**.
2. Click to enable the **Single Sign On** option and enter your domain name within the **Domain** field. For example, enter "Librestream".

This completes the procedure.

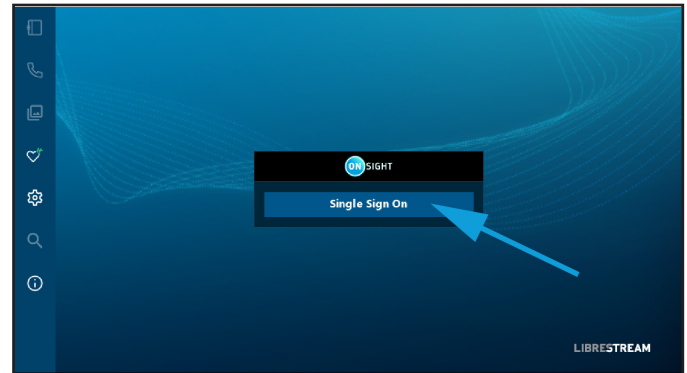

Logout and Login using SSO

1. Click the **Logout**  button within the left toolbar to exit Onsight Connect. A message window appears stating: "Are you sure you want to log out?"
2. Click **Yes** to continue.

- Click the **Single Sign On** button to login. This will redirect you to your company's login page.

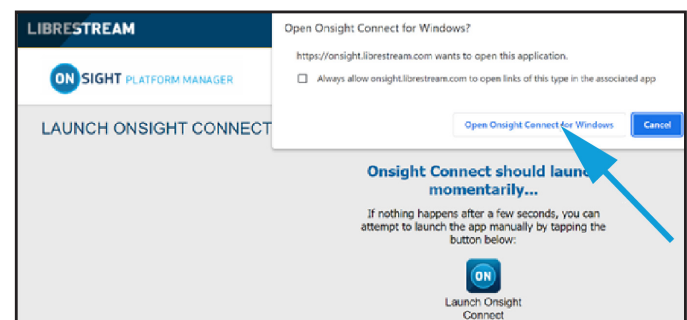

- Enter your **Username** and **Password** credentials and click **Sign in**.

- Click the **Launch Onsite Connect** button and select the **Open Onsite Connect for Windows** link.
TIP: Enable the **Always allow onsite.librestream.com to open links of this type in the associated app** check box, as necessary.

- You should now be logged in.

This completes the procedure.
